Cubit S.A. is a dynamic Greek company that operates in the area of information technology. The company's great experience in retail market and the continuous development of its executives on emerging global trends, allows us to offer high quality, innovative products. Our products cover flexibly and reliably the entire range of the market, and therefore offer tangible advantages to retailers.

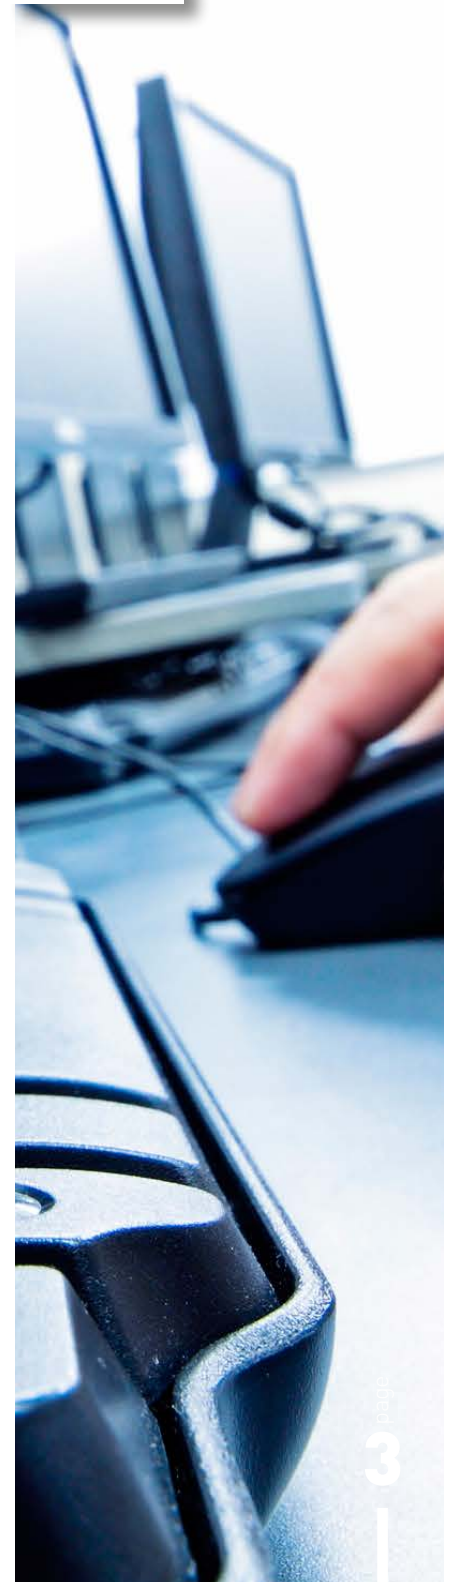

Cubit's application suite meets the high requirements of all companies and corporations, offers benefits that customers can directly ascertain, since the software embodies the company's expertise and it thus reassures the development and support of all large retail stores in Greece, Cyprus and Bulgaria.

Reflexis software can be used and installed in businesses of every size, in various industries, but also to companies who wish to obtain a software that in the future will follow closely their development and will offer maximum coverage of their needs.

Reflexis products are translated into English and Bulgarian and shortly in Romanian, in order to support multinational companies and Greek companies operating in other countries.

Finally, Reflexis is in full conformity with all international standards and the Greek legal and tax peculiarities.

The company Profile

Company development

The company is dedicated to address all competitive challenges of the competition and aims to stay ahead of development of the new millennium, therefore strengthens its investments with the sole purpose of upgrading the quality of its products and services to the final recipient: the customer. This is the reason why we invest and will continue to invest significantly in:

- the development of new solutions and products
- the reorganization of structures and processes
- the acquisition of fixed assets
- the strengthening of our manpower with specialized personnel

The success and establishment of CUBIT S.A. on the market can be mainly attributed to its absolute specialization in the retail sector in contrast to its competitors who operate on a wide range of services in the information technology market. The responsibility with which we meet the needs of each client, allows us to be considered an important ally for companies operating in the retail sector.

Our expertise, proven track record and priority on offering quality services constitute our competitive advantages and guarantee the success of any project.

Products

The software developed by CUBIT S.A. for the retail sector seeks to satisfy the continuously changing needs of the market. A sample list of our applications though not a restrictive one consists of:

- Cash register software - system development and control
- Support, administration and maintenance of the retail/wholesale system
- WMS Warehouse Organization
- Order execution
- Statistical analysis of sales data
- Creation and printing of labels for racks and product packaging
- Manage changes implemented by the headquarters of large retail chains and addition of new product codes received in each store
- Invoice generation and all other required documentation directly from the points of sale
- Mobile Terminal development
- Records management of electronic scales
- Use of biometric systems (fingerprints) that offer additional security

The company

Development - Products

The company, under the codename REFLEXIS®, designed and implemented an extensive investment program to develop software that will meet the needs of individual retail stores and large retail chains. REFLEXIS® targets businesses that comprehend the importance of the processing and exploitation of information as collected directly from the point of sale. It completely meets the business needs of the retail store, dealing with the product and the consumer always in accordance with their specific characteristics and needs.

REFLEXIS® is a comprehensive open environment product that provides unlimited capabilities for the management of sales, products, suppliers, purchases, stores and warehouses. Its key advantage mainly consists of its ability to collect and usefully exploit valuable information on various levels which assists in drawing conclusions and determining strategic objectives.

The creation of this particular product is possible with the use of the most advanced tools for design and development so that the final product can be applied to every size and type of retail businesses. It further has integrated the latest technologies in the areas of programming and relational database data. Its design allows for the installation and implementation of the functions it serves, at any level in the enterprise, ie central, branch offices, warehouses, shops. It holds a key technological advantage as it allows the amalgamation in its system of any size and structure of the supply chain and the sales of retail products.

The company, offers fully integrated solutions, therefore, in addition to the software provides also the hardware required for the installation of the operating systems. CUBIT S.A. is the the leader in the market of retail points of sale P.O.S, from established brands like WINCOR / NIXDORF, IBM and NCR.

Reflexis[®]ERP

The system

Reflexis ERP is an integrated information system that utilises all the new technologies, while its specifications include the complete set of business needs recorded by Cubit from its customers.

It meets all the requirements for a unified management of all the data compiled by each business. It further has unlimited potential and directly covers the entire volume of incoming information and data since the source of information and all functions are simply performed by the users of the system. It is extensible and open to meet all types of development of any business plan and thus may contribute in the best way in establishing an infrastructure to support the company in the next few years.

Reflexis ERP is an open architecture system that works with any specialised software and subsystems that each company has currently already installed (cash registers, retail sales, automation systems, warehouse handling) while can be fully customised to be user friendly and tailored to individual business processes.

The company can therefore fully trust the information system by entering all data without any risk, since there is no uncontrolled access to data files, operational systems and software. The outstanding quality of services offered by Cubit with its fully qualified personnel, provides efficient and reliable continual support and assistance to all its clients, on all working days and hours of the week.

Reflexis ERP constitutes the strategic selection of every company, which directly sees the benefits offered both in technological and developmental level.
